 Contact person: Tina García – gadu2004@clabsa.es

**Payment:**  
 Transfer to CLABSA  
 Banco BBVA  
 0182 0208 24 0200397296

If invoice required, indicate fiscal facts

Trade name .....  
 Address .....  
 Phone .....  
 TAX ID .....

Registration will be completed in receiving supporting document of transference by fax

Sewerage networks or urban drainage systems present, still today, important problems and pathologies that came out as flooding, negative environmental impact in receiving waters in dry or storm weather, odor and collapses. However, municipal managers are each time more conscious of the need to revert this situation, moved by a greater awareness and demand of the citizens and the European, National and Regional current legal requirements, each day more restrictive, particularly regarding environmental protection.

These are the reasons why a new model of management is gradually setting in Spain. A more modern and advanced management of sewerage networks. This management, called AMUD-GADU (Advanced Management of Urban Drainage-Gestión Avanzada del Drenaje Urbano), has been agreed in the framework of the Spanish Society of Water Supply and Sewerage, and has been already implemented in several municipalities. It must be pointed that the modernization of the management of GADU pattern, involves all its aspects: planning, projects, works direction, operation and maintenance, and it is suitable and adaptable to different local conditions of any municipality, no matter its size.

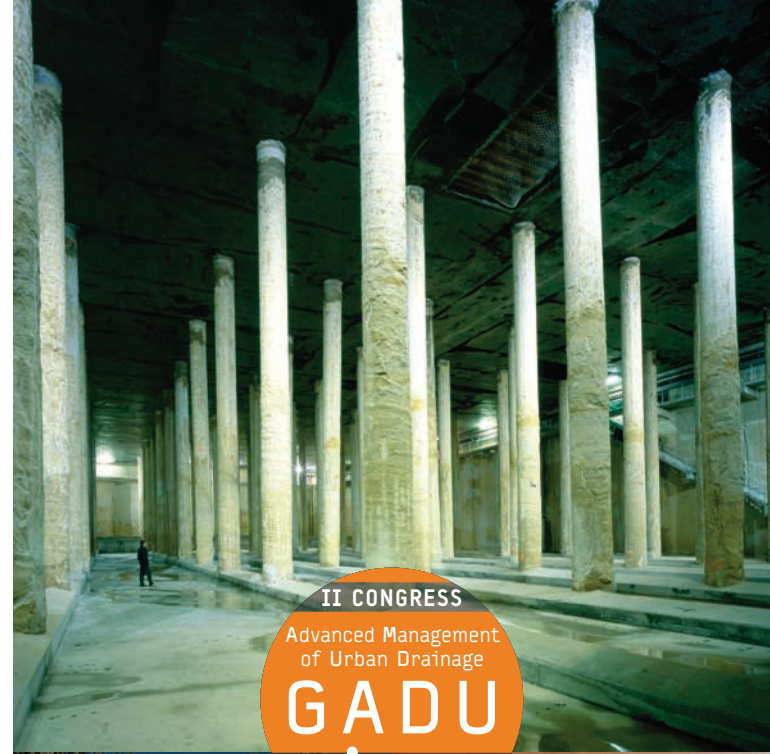

The increasing interest for these aspects, as well as the successful celebration of the 1<sup>st</sup> International Congress of the Advanced Management of Urban Drainage, that took place in 2000, have driven the call of this 2<sup>nd</sup> Congress, that will be privileged with the contribution of some of the best experts in the world in this topic, and includes the technical visit to stormwater detention tanks in the city of Barcelona.
